EDADASULA HARI NAGA SIVANI SAI KISHOR

Unity Game Developer & 3D Artist

+91 7981192088 | saikishor11419821@gmail.com | **Portfolio** | **LinkedIn** | Andhra Pradesh, India

PROFESSIONAL SUMMARY

Passionate and technical **Game Developer & 3D Artist** with hands-on experience designing, programming, and deploying interactive 2D/3D games using **Unity and C#**, along with custom asset creation in **Blender**. Specialized in core gameplay mechanics, character/ vehicle controllers, mission pipelines, UI systems, particle VFX, and WebGL optimization. Seeking a **Game Development Internship / Junior Game Developer role** to build immersive, high-performance gaming experiences.

TECHNICAL SKILLS

- **Game Development :** Unity Engine, C#, Gameplay Programming, Game Physics, Character Controllers, Vehicle & Flight Systems, Mission Architectures, Game UI/UX, Animation Controllers, Particle Systems / VFX, WebGL Deployment, Game Optimization.
- **3D Modeling & Art :** Blender, 3D Environment Design, UV Mapping, PBR Texturing & Materials, Lighting, Rigging Basics, Animation, FBX Export & Unity Asset Pipelines, Poly Haven Integration.
- **Programming Languages :** C#, C, C++, Java, Python, SQL.
- **Developer Tools :** Unity Editor, Blender, Visual Studio, VS Code, Git, GitHub, Firebase.
- **CSE(AIML) Core :** Data Structures & Algorithms, MySQL, Artificial Intelligence & Machine Learning Fundamentals.

FEATURED GAME PROJECT

DriveVerse City - Open-World 3D Driving Game — **Unity, C#, Blender, WebGL**

Live on: https://kishor111.itch.io/drive | GitHub: **github.com/saikishor11419821/Driveverse-City**

- **Environment & Asset Pipeline:** Designed an expansive open-world 3D city with diverse biomes (houses, forests, rivers, deserts, caves, and a kingdom); modeled custom 3D assets in Blender with PBR materials, optimized colliders, and dynamic lighting.
- **Vehicle & Flight Mechanics:** Scripted modular C# driving systems, seamless enter/exit vehicle transitions, garage vehicle purchasing/spawning, illegal car selling mechanics, and full helicopter flight physics with restricted-area air missions.
- **Missions & Gameplay Systems:** Implemented taxi missions with passenger pickup/drop-off, objective management, mini-map GPS navigation, directional objective arrows, real-time player health, and cash economy mechanics.
- **Optimization & WebGL:** Built clean, multi-scene dynamic UI systems and optimized shaders/textures to achieve smooth web framerates for WebGL deployment.

GAME DEVELOPMENT EXPERIENCE & MECHANICS

- **Player Movement :** Built full character control systems (idle, walk, run, jump, attack) with smooth animation transitions and realistic movement physics.
- **Random Levels & Mobile Setup :** Created endless runner mechanics featuring dynamic obstacle generation, item collection, and mobile touch support.
- **VFX & Environment :** Created custom environmental effects (fire, rain, dust) and realistic surface materials like glass and reflective water.
- **Systems & Performance :** Programmed interactive game events and spent time testing performance, fixing bugs, and smoothing out frame rates.

3D MODELING & ASSET CREATION PIPELINE

- **Asset Creation :** Modeled high and low-poly 3D game assets and environmental architectures using **Blender**.
- **Texturing & Shading :** Applied precise UV unwrapping and PBR texture maps (diffuse, normal, roughness, displacement) leveraging Poly Haven assets for realism.
- **Engine Export Workflows :** Configured clean FBX export workflows, preserving normals, pivot points, scale, and materials for seamless Unity asset integration.

EDUCATION & CERTIFICATIONS

B.Tech – Computer Science & Engineering (AI & ML) | Pursuing — **2023 – 2027**

BVC College of Engineering, Rajahmundry, Andhra Pradesh — **CGPA: 8.72 / 10.0**

Certifications:

- **Game Design Using Unity 3D** - APSDC(June 2026)
- **UNITY - Introduction to Unity Game Development** - Infosys|springboard(June 2025)
- **Blender - Beginners** - Infosys|springboard(June 2026)
